The Honorable Rosa DeLauro Chair Appropriations Subcommittee on Labor, Health and Human Services, Education and Related Agencies U.S. House of Representatives Washington, DC 20515

The Honorable Tom Cole Ranking Member Appropriations Subcommittee on Labor, Health and Human Services, Education and Related Agencies U.S. House of Representatives Washington, DC 20515

Dear Chair DeLauro and Ranking Member Cole:

As the largest purchaser of health care—more than \$1 trillion per year and rising—the federal government has an enormous stake in spending each health dollar wisely. Patients deserve health care that works for them, and taxpayers deserve smart spending. Indeed, in poll after poll, health care costs are consistently top of mind for Americans. The Agency for Healthcare Research and Quality (AHRQ) helps ensure Americans get the best care at the best value.

As you draft the Labor, Health and Human Services, Education and Related Agencies appropriations legislation for fiscal year (FY) 2020, the **152 undersigned members of the Friends of AHRQ respectfully request \$460 million in budget authority for the agency**, which is consistent with the FY 2010 level adjusted for inflation. This funding level would allow AHRQ to rebuild portfolios terminated as a result of years of past cuts and expand its research and training portfolio to address our nation's pressing and evolving health care challenges. Additionally, with a quarter of the agency's program level budget supported by the Patient-Centered Outcomes Research Trust Fund, a strong investment in the AHRQ appropriation will be essential to sustain the agency's core activities as the Trust Fund undergoes reauthorization this year.

The vast majority of federally funded research focuses on one specific disease, organ system, cellular or chemical process. AHRQ is the only federal agency that funds research at universities and other research institutions throughout the nation on health systems—the "real-life" patient who has complex comorbidities, the interoperability of different technological advances, and the interactions and intersections of health care providers. AHRQ also generates data to monitor the health care landscape and ensures the pipeline of new medical findings reaches health care providers and patients, regardless of where they work and live, and provides them with the tools and training they need to use those findings every day in the care of patients.

An example of AHRQ's successful work includes efforts to reduce hospital acquired conditions. New, preliminary data from AHRQ finds that by implementing transformational, AHRQ-funded research, hospitals, health systems, and other providers have prevented an estimated 20,500 hospital deaths and saved \$7.7 billion in health care costs from 2014 to 2017. In another example, AHRQ funded research grants are finding ways to ensure rural primary care practices are equipped to respond to the opioid

crisis. An explosion in the incidence of opioid addiction and overdoses, particularly in rural areas of the country, has elevated this issue to crisis-level in the United States. Primary care practices are often the first line of defense against this and other substance use disorders.

The Friends of AHRQ recognize the importance of investing federal funds strategically. We strongly believe that AHRQ more than earns a place among your appropriations priorities, and urge you to provide the agency \$460 million in budget authority in FY 2020. Doing so would signal your continued commitment not just to produce discoveries, but to produce science that translates medical progress into better care for patients *today*.

Thank you for considering our recommendation. For more information, including a copy of our report on AHRQ's contributions to improved health and health care over the years, please contact Kristin Rosengren at 202.292.6700 or kristin.rosengren@academyhealth.org.
